

GLOBAL EARTHQUAKE DATASET REPORT

Original Columns Used in Model

- 1. Latitude
- 2. Longitude
- 3. Depth
- 4. Place
- 5. Depth Category (shallow, intermediate, etc.)
- 6. Number of Seismic Stations Used
- 7. Distance to Nearest Station (degrees)

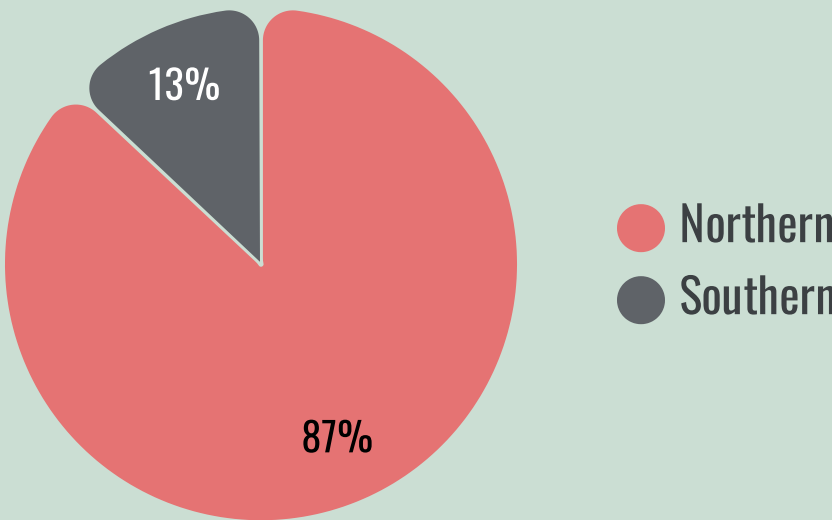

Derived Columns Used in Model

- 1. Hemisphere
- 2. Continuous Decimal Year

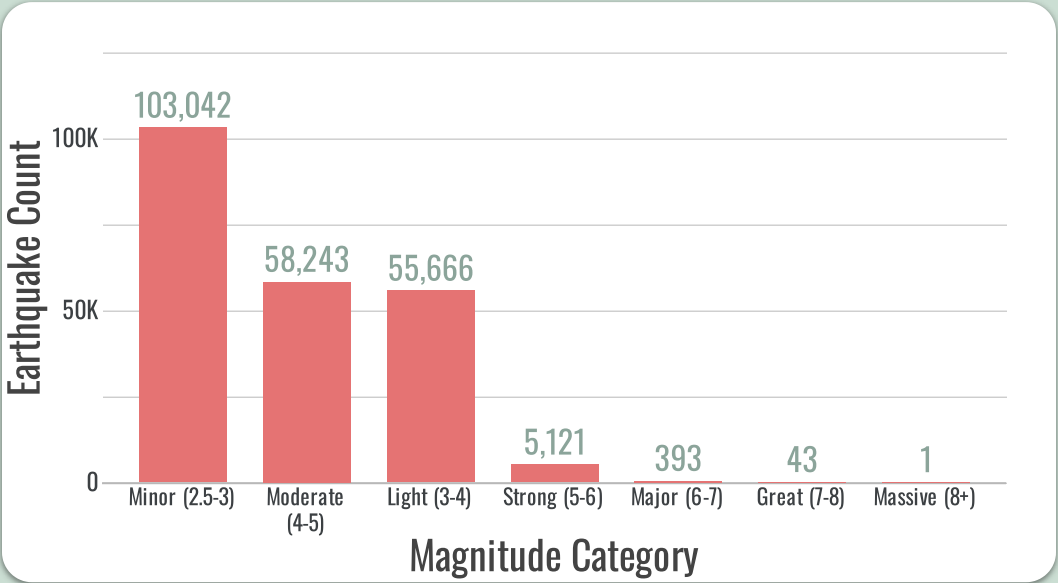

Other Derived Columns

- 1. Season Earthquake Occurred
- 2. Location of Earthquake

Earthquakes per Hemisphere

Earthquake Count by Magnitude Category

Initial Dataset

1056209 Rows

Complete Cleaned Dataset

222509 Rows

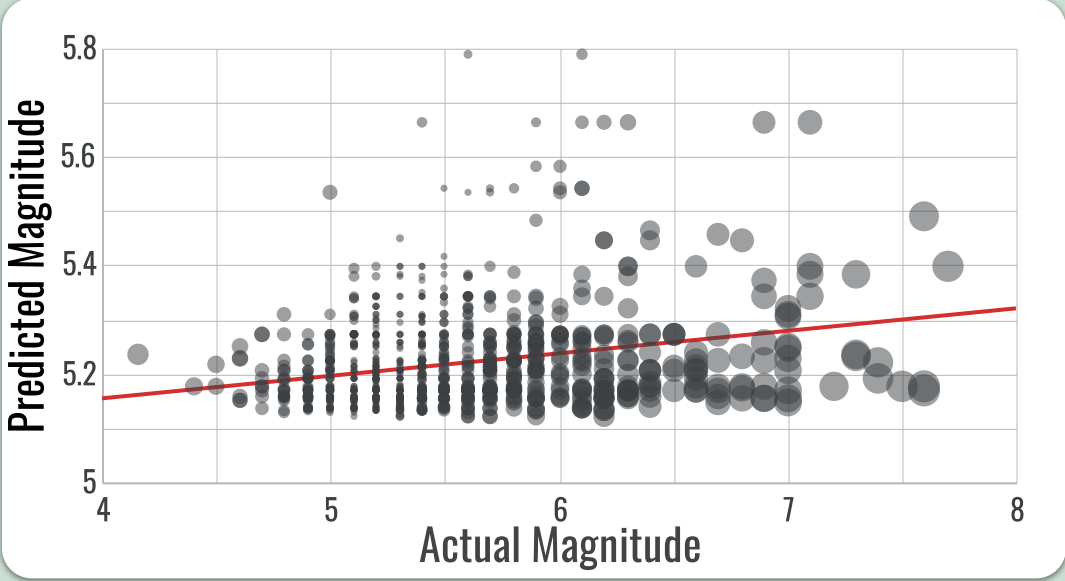

Model Training Using

178007 Rows

Model Tested Using

44502 Rows

Actual Magnitude vs Predicted Magnitude

Distribution of Absolute Error

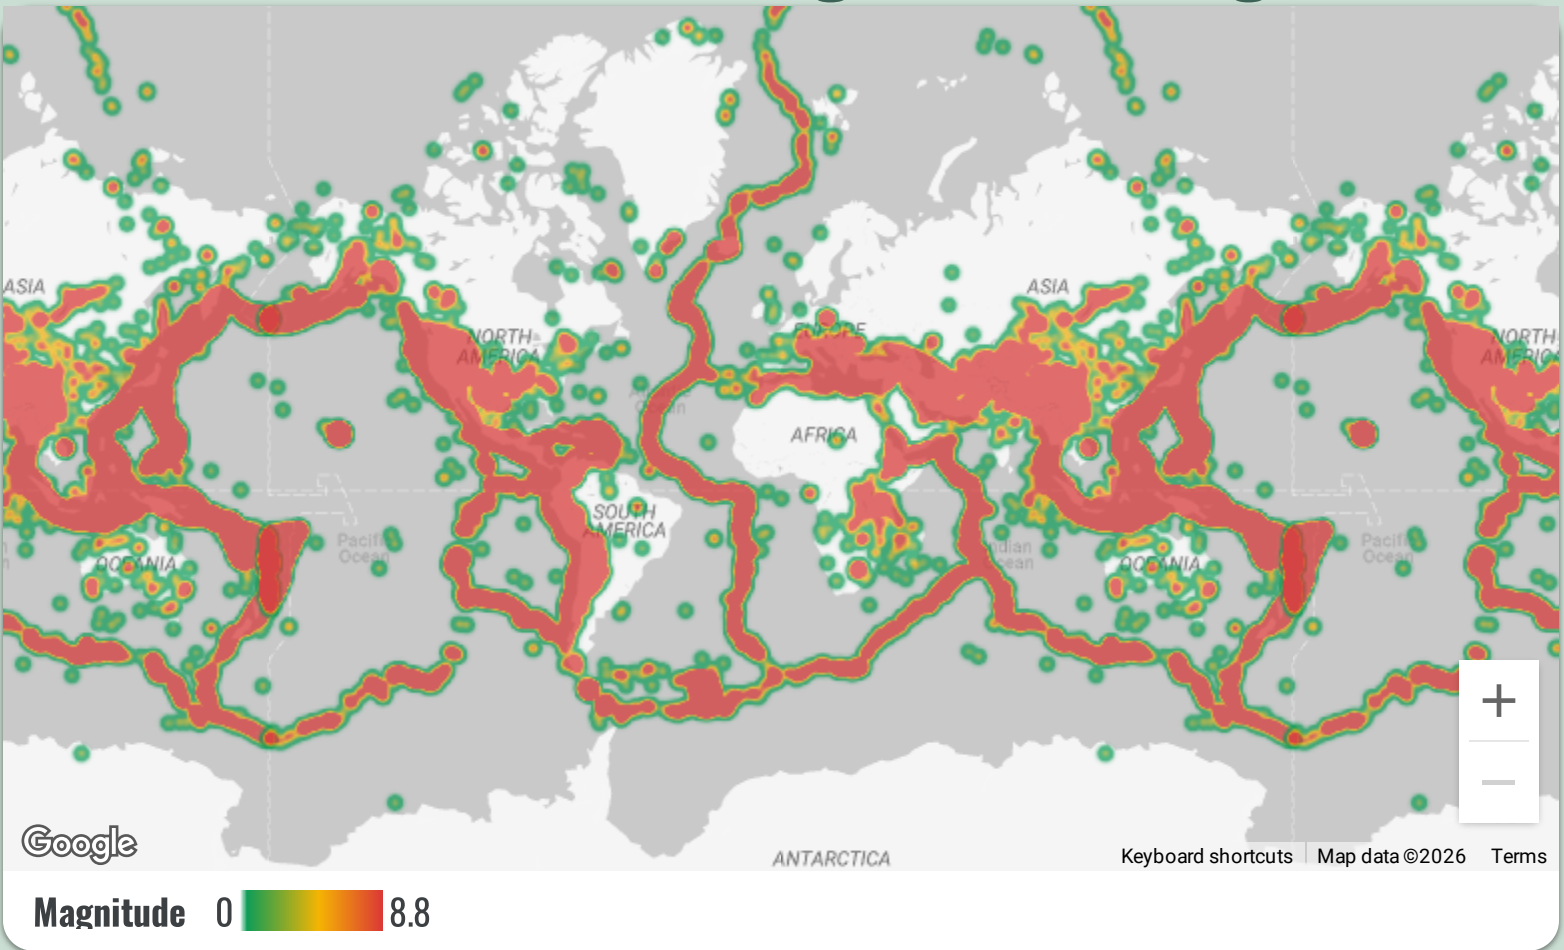

Average Actual Magnitude

3.40

Average Predicted Magnitude

3.38

GPS Location by Average Actual Magnitude

GPS Location by Average Absolute Error
